Professional Summary

Oracle PL/SQL Developer with **nearly 5 years of experience at Accenture**, delivering high-performance database solutions for enterprise banking and telecom platforms. Achieved up to **50% improvement in query performance** and cut release cycles by **40%** through CI/CD automation. Currently leading the **DataStage-to-Airflow ETL migration** for NBN's Tactical Address Management System (TAMS) as a Senior Analyst. Expertise spans PL/SQL programming, SQL tuning, ETL pipeline design, and cloud-managed databases on AWS. Proven ability to bridge complex business requirements – across Capital & Impairment, ALM, Liquidity Risk, and network infrastructure domains – with scalable, production-grade database engineering.

Experience

Senior Application Development Analyst — **March 2026 – Present**

Accenture — *Hyderabad, India*

Application Development Analyst — *November 2022 – February 2026*

Application Development Associate — *July 2021 – October 2022*

- **[Senior]** Led end-to-end migration of **DataStage ETL pipelines to Apache Airflow** for the TAMS (Tactical Address Management System) application, modernizing the orchestration layer for Geoscape location data powering NBN's national network infrastructure.
- **[Senior]** Redesigned and re-engineered **database components and PL/SQL workflows** within TAMS to align with Airflow DAG-based scheduling, ensuring zero data loss and seamless continuity of geospatial data processing.
- **[Senior]** Owned technical design decisions for the migration architecture, coordinating across functional, infrastructure, and QA teams to deliver a production-ready solution with **no disruption to live NBN location data feeds**.
- Engineered complex PL/SQL packages, stored procedures, triggers, and views across enterprise banking and telecom projects, **improving query performance by up to 50%**.
- Conducted deep **SQL tuning and execution plan analysis** – leveraging indexes, SQL hints, partitioning, and Bulk Collect/FORALL – to reduce query response times and lower system resource usage.
- Designed and automated **ETL workflows and data migration pipelines**, ensuring data accuracy, consistency, and real-time availability across multi-system environments.
- Integrated PL/SQL deployments into **CI/CD pipelines** using Git and Liquibase, reducing release cycle time by **40%** and eliminating manual deployment errors.
- Collaborated with functional and business teams to translate regulatory requirements into efficient PL/SQL solutions for **Capital & Impairment, ALM, and Liquidity Risk** modules.
- Managed and optimized **Oracle databases on AWS RDS**, cutting operational costs by 20% through proactive capacity monitoring with AWS CloudWatch.
- Led **SIT, UAT, and regression testing** cycles; automated 80% of manual data validation checks, reducing validation time by 25% per release.
- Authored technical documentation and **mentored junior developers** on PL/SQL best practices, code review standards, and performance tuning strategies.

Education

Bachelor of Technology – Aeronautical Engineering — **Graduated: 2021**

MLR Institute of Technology — *Hyderabad | CGPA: 7.4*

- Transitioned into software development post-graduation; built core programming skills through self-study in SQL, PL/SQL, and Python, leading to Oracle certification in 2021.

Skills

Core Languages: SQL, PL/SQL, Python
Database & Tools: Oracle SQL Developer, TOAD, SQL*Plus, Oracle DB (11g/12c/19c)
Performance Tuning: Execution Plan Analysis, Index Optimization, SQL Hints, Bulk Collect, FORALL, Partitioning
ETL & Data Engineering: Data Migration, Integration, Validation, Data Modelling, Apache Airflow (Pipeline Orchestration)
Cloud & DevOps: AWS (RDS, EC2, S3, CloudWatch), Apache Airflow, Git, Liquibase, UNIX Scripting
Testing: Unit Testing, SIT, UAT, Regression Testing, SOAPUI
Reporting: Power BI (DAX, Dashboards)
Domain Knowledge: Banking (Capital & Impairment, ALM, Liquidity Risk, Securitization), Telecom, Geospatial Data

Certifications

- **Oracle Certified Foundations Associate** – Oracle University, 2021
- **Python for Data Science** – IBM Developer Skills Network
- **Product Lifecycle Management** – Tata Technologies, 2020
- **MATLAB Onramp** – MathWorks

Projects

NBN – TAMS (Tactical Address Management System) | PL/SQL, Apache Airflow, DataStage, Oracle, AWS

- Leading migration of legacy **DataStage ETL pipelines to Apache Airflow**, re-engineering database components and PL/SQL workflows to support DAG-based orchestration for Geoscape geospatial location data.
- Redesigned TAMS database layer to handle **high-volume geospatial dataset processing** with improved scheduling reliability, reduced pipeline failures, and real-time data availability for NBN's national infrastructure.
- Coordinating across infrastructure, QA, and functional teams to ensure **zero-downtime migration** with full data integrity validation at each phase.

National Broadband Network (NBN) – ELMS | PL/SQL, ETL, AWS, Python, SOAPUI

- Developed PL/SQL procedures, triggers, and views for **bulk data processing** of geospatial PSMA datasets, improving throughput and minimizing system downtime.
- Automated quarterly ETL workflows to load datasets from the Geoscape portal, **automating 80% of manual validation checks** and cutting per-cycle validation time by 25%.
- Integrated PL/SQL deployments into **CI/CD pipelines** (Git + Liquibase), reducing release time by 40% and eliminating manual deployment errors.
- Managed Oracle databases on **AWS RDS**, reducing operational costs by 20% through CloudWatch monitoring and proactive capacity planning.
- Strengthened system reliability by integrating RDS snapshots into disaster recovery plans and validating API performance via SOAPUI.

TSB Banco Sabadell – Capital & Impairment | Banking, ETL, PL/SQL, Power BI

- Designed PL/SQL components to calculate capital and impairment metrics against the bank's full asset portfolio, aligned with regulatory reporting standards (IFRS 9).
- Optimized SQL queries and data models, achieving **25% faster query execution** and **20% reduction in system resource consumption**, directly improving financial reporting efficiency.
- Partnered with functional and QA teams across **SIT and UAT cycles** to validate data accuracy, resolve defects, and ensure zero-error deployments.

TSB Banco Sabadell – Securitization | Banking, ETL, PL/SQL

- Built and optimized views and PL/SQL procedures to assess capital adequacy and impairment metrics for securitized assets, **improving module performance by 15%**.
- Validated financial data integrity across all integrated modules through system integration and regression testing, ensuring full compliance with reporting standards.
- Provided **production support** during data migration and month-end processing, resolving data issues with zero business-impacting downtime.
